

Hunter Ratliff

Curriculum Vitae

PERSONAL DETAILS

Mail hratliff@vols.utk.edu
Citizenship United States

EDUCATION

Ph.D. Nuclear Engineering May 2015-December 2018
University of Tennessee, Knoxville

M.S. Nuclear Engineering May 2015-December 2016
University of Tennessee, Knoxville

B.S. Nuclear Engineering August 2011-May 2015
University of Tennessee, Knoxville

WORK EXPERIENCE

Postdoctoral Fellow April 2019-present
Japan Atomic Energy Agency

Graduate Research Assistant Summer 2015-December 2018
University of Tennessee, Knoxville
See the Graduate Projects section on the third page.

Graduate Teaching Assistant Fall 2015-Fall 2016
University of Tennessee, Knoxville
I worked as a GTA for the undergraduate nuclear engineering lab courses which had a primary focus on radiation detection and use of NIM equipment. I also worked as a GTA for the graduate course on radiation protection.

Intern at ORNL May 2014-August 2014
Oak Ridge National Laboratory, Full-time Internship
I worked on debugging a documenting a computational fluid dynamics code written in C++ and FORTRAN. The job also involved working in a Unix environment using Open MPI to execute the code on a remote cluster.

TALKS/PRESENTATIONS GIVEN

Mars Space Radiation Modeling Workshop 2018

17 October 2018

Southwest Research Institute

Boulder, CO

Overview of model evaluation: "MCNP6" (2018)

Co-presented with Michael B.R. Smith

20th Topical Meeting of the Radiation Protection and Shielding Division of the American Nuclear Society (Conference)

29 August 2018

American Nuclear Society

Santa Fe, NM

Secondary neutron yields from thick-target GCR accelerator experiments

James E. Turner Back to School Lecture Series

24 February 2018

Roane State Community College, Oak Ridge campus

Oak Ridge, TN

The radiation environment on the Martian surface: A modeling challenge and benchmarking opportunity

Mars Space Radiation Modeling Workshop 2016

29 June 2016

Southwest Research Institute

Boulder, CO

Overview of model evaluation: "MCNP6" (2016)

Co-presented with Michael B.R. Smith

GRADUATE PROJECTS

Analysis of experimentally measured neutrons Summer 2015-December 2018

Ph.D. project, Completed

I was involved in the data collection of 400 hours of accelerator experiments involving GCR-like beams incident on targets characteristic of spacecraft walls/shielding followed by a second target to emulate the back wall of a spacecraft. From these experiments, I analyzed all collected neutron data which is broken down into two categories. First, I worked on characterizing the neutrons produced in the primary target which traveled directly to detectors. This involved employing standard time-of-flight techniques, though I also improved some of the existing methodology in my work. Next, neutrons produced in the second downstream target and those scattered throughout the room were characterized using a pulse height deconvolution technique developed for this work. In addition to developing the deconvolution method, this also involved development of neutron response matrices using the SCINFUL-QMD code.

Mars surface radiation simulations in MCNP6

2016-2018

M.S. project (2016) and Side project (2018), Completed

For a series of collaborative workshops hosted by SWRI, the first in June 2016 and second in October 2018, I worked on modeling in MCNP6 the GCR environment in the RAD detector aboard the Curiosity rover on Mars. The project required advanced usage of MCNP6 and heavy scripting for preparing input files and processing results.

Modernization of CLSQ

Summer 2015

Side project, Completed

I rewrote the 1962 CLSQ Brookhaven Decay Curve Analysis Program, originally in FORTRAN IV, in Python 3. In the process, the input syntax was completely redone to be far more user-friendly. Comprehensive documentation, which did not exist with the original code, was written for this effort. The updated code can be found at: <https://github.com/Lindt8/CLSQ2>

SKILLS

Programming languages

Python 3, MATLAB, FORTRAN

Transport codes

MCNP, PHITS

Software

L^AT_EX, Microsoft Office, ROOT

Other software

Command-line interfaces for Windows and Unix

Web design (limited exp.)

HTML, CSS, and Google Sites
